

Solving Virtual CISO Services from NopalCyber

Stop Struggling With Cybersecurity

A Virtual Chief Information Security Officer (vCISO) supplies the experience, vision, and leadership missing from so many cybersecurity strategies. Plus, they are faster, cheaper, and easier to bring onboard than a full-time hire. Before switching tools or changing tactics, consider if a vCISO could be the solution to all your cybersecurity struggles.

Improve Everything With a vCISO

As YOUR cybersecurity executive, a vCISO handles whatever issues, upgrades, and outcomes you want, including:

- **Security Program Development & Management:** Update security policies and IR plans to reflect your evolving risks, operations, and business objectives.
- **Strategic Security Leadership:** Develop robust security architecture and keep senior management briefed on cybersecurity.
- **Compliance & Regulatory Support:** Get compliant with major frameworks, prepare for upcoming audits, and enforce compliant security policies.
- **Security Operations Management:** Improve how the SOC approaches threat monitoring, vulnerability assessment, pen testing, and intelligence gathering.
- **Training and Awareness:** Teach employees how to identify and avoid pervasive threats like phishing to make people a cybersecurity strength.
- **Vendor Management:** Evaluate the security risks of third-party vendors and review contracts for security and compliance requirements.
- **Metrics and Reporting:** Identify unique KPIs and develop ways to track, benchmark and report on the progress to all stakeholders.

A vCISO does many things, but they have one purpose: To ensure you get cybersecurity right.

Getting Started With vCISO Services

Our vCISOs work with companies of all sizes across all industries. We are fully committed to each of our clients—but the level of security and support we deliver is entirely up to you. You tell us what entitlements and outcomes you expect and how much infrastructure you need to cover, then we scope and price vCISO services to match. That way, you never pay for more than you need or get less help than you want.

Replace stress with security—vCISO is the key, and NopalCyber is your source. Contact us today for a more secure tomorrow.

Why Companies Trust NopalCyber

As YOUR cybersecurity executive, a vCISO handles whatever issues, upgrades, and outcomes you want, including:

Constant Contact

Regular meetings, ad-hoc advisory sessions, and on-demand expertise keeps your vCISO very closely involved.

Team Approach

Your vCISO is actually a whole team of security experts equipped to handle any issue at any time without any coverage gaps.

Strategic Mindset

Whether developing security roadmaps or briefing executives, we tailor our approach to your security, IT, and business strategy.

Consistent ROI

vCISOs save money and drive revenue by helping pick safer vendors, avoid regulatory fines, guide technology spending, and minimize security incidents.

24/7 Availability

Your vCISO is available 24/7/365 when major security incidents happen, and rapid response is our default speed at all times.

Bespoke Service

We tailor everything we do to match your requirements, and our services evolve at the same pace as your IT, risk, and business.

About NopalCyber

NopalCyber makes cybersecurity manageable, affordable and reliable. Managed extended detection and response (MXDR), attack surface management (ASM), breach and attack simulation (BAS), and advisory services fortify your offensive and defensive cybersecurity posture. AI-driven intelligence in its Nopal360° platform, the NopalGo application, and its proprietary Cyber Intelligence Quotient (CIQ) lets anyone quantify, track, and visualize their cybersecurity posture in real-time. NopalCyber's offensive and defensive services and external threat analysis are tailored to each client's need. NopalCyber democratizes cybersecurity by making enterprise-grade security available to organizations of all sizes.
